

## Kagan Skyrockets Test Scores

**Catalina Ventura School, 8th Grade**

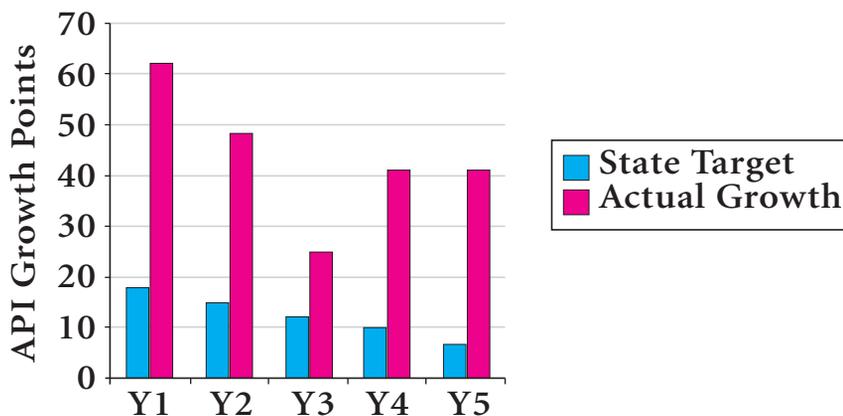

*"Finally, without a doubt, teachers love Kagan Structures, students have fun and learn more as they participate in the structures, and standardized test scores have dramatically improved as teachers have become more confident with using these structures. Many thanks to you and your team for providing such a blessing to our school."*

**Scott Heusman, Principal  
Catalina Ventura School**

Catalina Ventura eighth graders show marked improvement in all subject areas over three years. The chart shows an improvement of five normal curve equivalents (NCE) in math when comparing Year 1 to Year 2. Furthermore, Catalina eighth grade language scores increased from 47 NCE to 52 NCE. This growth is attributed to Catalina Ventura's outstanding leadership, staff development, and the implementation of highly successful Kagan teaching strategies.

## Kagan Far Exceeds State Targets

**Foster Road Elementary**

*"We received the results of our state testing, and my school had the highest growth points in our district. We made it to #1. It is all because of Kagan Structures and Strategies. Thank you for all your help and training."*

**— Dr. Jean Maddox,  
Principal, Foster Road  
Elementary**

In 2004, Foster Road Elementary had the highest growth points in their district. They exceeded California's Academic Performance Index (API) target by 485%. Since the inception of the Public Schools Accountability Act, Foster Road's gains have surpassed the state's target by large margins. Principal Dr. Jean Maddox attributes much of their success to their work with Kagan.
